Gene Information

Entrez GeneID: [822](#)

Gene Name: CAPG

Gene Alias: AFCP,MCP

Gene capping protein (actin filament), gelsolin-like
Description:

Omim ID: [153615](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: This gene encodes a member of the gelsolin/villin family of actin-regulatory proteins. The encoded protein reversibly blocks the barbed ends of F-actin filaments in a Ca²⁺ and phosphoinositide-regulated manner, but does not sever preformed actin filaments. By capping the barbed ends of actin filaments, the encoded protein contributes to the control of actin-based motility in non-muscle cells. Alternatively spliced transcript variants have been observed, but have not been fully described. [provided by RefSeq]
