**Entrez GeneID:** 826

**Gene Symbol:** CAPNS1

**Gene Alias:** 30K, CALPAIN4, CANP, CANPS, CAPN4, CDPS

**Gene Summary:** Calpains are a ubiquitous, well-conserved family of calcium-dependent, cysteine proteases. Calpain families have been implicated in neurodegenerative processes, as their activation can be

triggered by calcium influx and oxidative stress. Calpain I and II are heterodimeric with distinct large subunits associated with common small subunits, all of which are encoded by different genes. This gene encodes a small subunit common to both calpain I and II and is associated with myotonic dystrophy. Two transcript variants encoding the same protein have been identified for this gene.
