Gene Name: CAPNS1

Gene Alias: 30K,CALPAIN4,CANP,CANPS,CAPN4,CDPS

Gene Description: calpain, small subunit 1

Omim ID: [114170](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: Calpains are a ubiquitous, well-conserved family of calcium-dependent, cysteine proteases. Calpain families have been implicated in neurodegenerative processes, as their activation can be triggered by calcium influx and oxidative stress. Calpain I and II are heterodimeric with distinct large subunits associated with common small subunits, all of which are encoded by different genes. This gene encodes a small subunit common to both calpain I and II and is associated with myotonic dystrophy. Two transcript variants encoding the same protein have been identified for this gene. [provided by RefSeq]

Other Designations: calcium-activated neutral proteinase,calcium-dependent protease, small subunit,calpain 4, small subunit (30K),calpain, small polypeptide
