Gene Name: CAST

Gene Alias: BS-17,MGC9402

Gene Description: calpastatin

Omim ID: [114090](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: The protein encoded by this gene is an endogenous calpain (calcium-dependent cysteine protease) inhibitor. It consists of an N-terminal domain L and four repetitive calpain-inhibition domains (domains 1-4), and it is involved in the proteolysis of amyloid precursor protein. The calpain/calpastatin system is involved in numerous membrane fusion events, such as neural vesicle exocytosis and platelet and red-cell aggregation. The encoded protein is also thought to affect the expression levels of genes encoding structural or regulatory proteins. Several alternatively spliced transcript variants of this gene have been described, but the full-length nature of only some have been determined. [provided by RefSeq]

Other Designations: OTTHUMP00000158519,OTTHUMP00000158520,calpain inhibitor,heart-type calpastatin,sperm BS-17 component
