Gene Name: RUNX3

Gene Alias: AML2,CBFA3,FLJ34510,MGC16070,PEBP2aC

Gene Description: runt-related transcription factor 3

Omim ID: [600210](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: This gene encodes a member of the runt domain-containing family of transcription factors. A heterodimer of this protein and a beta subunit forms a complex that binds to the core DNA sequence 5'-PYGPYGGT-3' found in a number of enhancers and promoters, and can either activate or suppress transcription. It also interacts with other transcription factors. It functions as a tumor suppressor, and the gene is frequently deleted or transcriptionally silenced in cancer. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq]
