Gene Name: CBL

Gene Alias: C-CBL,CBL2,RNF55

Gene Description: Cas-Br-M (murine) ecotropic retroviral transforming sequence

Omim ID: [165360](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: The cbl oncogene was first identified as part of a transforming retrovirus which induces mouse pre-B and pro-B cell lymphomas. As an adaptor protein for receptor protein-tyrosine kinases, it positively regulates receptor protein-tyrosine kinase ubiquitination in a manner dependent upon its variant SH2 and RING finger domains. Ubiquitination of receptor protein-tyrosine kinases terminates signaling by marking active receptors for degradation. [provided by RefSeq]

Other Designations: oncogene CBL2
