Gene Information

Entrez GeneID: [932](#)

Gene Name: MS4A3

Gene Alias: CD20L,HTM4

Gene Description: membrane-spanning 4-domains, subfamily A, member 3 (hematopoietic cell-specific)

Omim ID: [606498](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: This gene encodes a member of the membrane-spanning 4A gene family. Members of this protein family are characterized by common structural features and similar intron/exon splice boundaries and display unique expression patterns among hematopoietic cells and nonlymphoid tissues. This family member likely plays a role in signal transduction and may function as a subunit associated with receptor complexes. The gene encoding this protein is localized to 11q12, among a cluster of related family members. Alternative splicing may result in multiple transcript variants; however, not all variants have been fully described. [provided by RefSeq]
