### Applications

#### Western Blot (Transfected lysate)

Western Blot analysis of CD86 expression in transfected 293T cell line ([H00000942-T01](#)) by CD86 MaxPab polyclonal antibody.

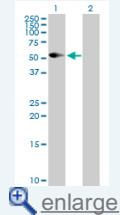

Lane 1: CD86 transfected lysate(37.70 KDa).

### In situ Proximity Ligation Assay (Cell)

Proximity Ligation Analysis of protein-protein interactions between CD86 and CD80. HeLa cells were stained with anti-CD86 rabbit purified polyclonal 1:1200 and anti-CD80 mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex, and nuclei were counterstained with DAPI (blue).

Description:

Gene Ontology: [Hyperlink](#)

**Gene Summary:** This gene encodes a type I membrane protein that is a member of the immunoglobulin superfamily. This protein is expressed by antigen-presenting cells, and it is the ligand for two proteins at the cell surface of T cells, CD28 antigen and cytotoxic T-lymphocyte-associated protein 4. Binding of this protein with CD28 antigen is a costimulatory signal for activation of the T-cell. Binding of this protein with cytotoxic T-lymphocyte-associated protein 4 negatively regulates T-cell activation and diminishes the immune response. Alternative splicing results in two transcript variants encoding different isoforms. Additional transcript variants have been described, but their full-length sequences have not been determined.
