CSH2 Pre-design Chimera RNAi

Catalog # : H00001443-R03

規格 : [10 nmol] [20 nmol]

List All

Specification

Application Image

Product Description: Homo sapiens chorionic somatomammotropin hormone 2 (CSH2), transcript variant 3, mRNA.

RNAi Knockdown

Reactivity: Human

Supplied Product: DEPC water

Target Refseq: NM_022645

Storage Instruction: Store at -20°C, do not exceed 4 - 5 freeze-thaw cycles to ensure product integrity.

Note: Position of the Chimera RNAi.

RNAi Knockdown

Gene Information

Entrez GeneID: [1443](#)

Gene Name: CSH2

Gene Alias: CS-2,CSB,hCS-B

Gene chorionic somatomammotropin hormone 2

Description:

Omim ID: [118820](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: The protein encoded by this gene is a member of the somatotropin/prolactin family of hormones and plays an important role in growth control. The gene is located at the growth hormone locus on chromosome 17 along with four other related genes in the same transcriptional orientation; an arrangement which is thought to have evolved by a series of gene duplications. Although the five genes share a remarkably high degree of sequence identity, they are expressed selectively in different tissues. Alternative splicing generates additional isoforms of each of the five growth hormones. This particular family member is expressed mainly in the placenta and utilizes multiple transcription initiation sites. Expression of the identical mature proteins for chorionic somatomammotropin hormones 1 and 2 is upregulated during development, while the ratio of 1 to 2 increases by term. Structural and expression differences provide avenues for developmental regulation and tissue specificity. [provided by RefSeq]
