Entrez GeneID: 1466

Gene Symbol: CSRP2

Gene Alias: CRP2, LMO5, SmLIM

Gene Summary: CSRP2 is a member of the CSRP family of genes, encoding a group of LIM domain

proteins, which may be involved in regulatory processes important for development and cellular differentiation. CRP2 contains two copies of the cysteine-rich amino acid sequence motif (LIM) with putative zinc-binding activity, and may be involved in regulating ordered cell growth. Other genes in the family include CSRP1 and CSRP3. [provided by RefSeq]
