### Gene Information

**Entrez GeneID:** [1487](#)

**Gene Name:** CTBP1

**Gene Alias:** BARS,MGC104684

**Gene** C-terminal binding protein 1

**Description:**

---

**Omim ID:** [602618](#)

---

**Gene Ontology:** [Hyperlink](#)

---

**Gene Summary:** This gene encodes a protein that binds to the C-terminus of adenovirus E1A proteins. This phosphoprotein is a transcriptional repressor and may play a role during cellular proliferation. This protein and the product of a second closely related gene, CTBP2, can dimerize. Both proteins can also interact with a polycomb group protein complex which participates in regulation of gene expression during development. Alternative splicing of transcripts from this gene results in multiple transcript variants. [provided by RefSeq]
