Gene Name: CTSG

Gene Alias: CG,MGC23078

Gene cathepsin G

Description:

Omim ID: [116830](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: The protein encoded by this gene, a member of the peptidase S1 protein family, is found in azurophilic granules of neutrophilic polymorphonuclear leukocytes. The encoded protease has a specificity similar to that of chymotrypsin C, and may participate in the killing and digestion of engulfed pathogens, and in connective tissue remodeling at sites of inflammation. Transcript variants utilizing alternative polyadenylation signals exist for this gene. [provided by RefSeq]
