CYP2B6 Pre-design Chimera RNAi

Catalog # : H00001555-R01 規格 : [10 nmol] [20 nmol]

List All

Specification

Product Description: Homo sapiens cytochrome P450, family 2, subfamily B, polypeptide 6 (CYP2B6), mRNA.

Application Image

RNAi Knockdown

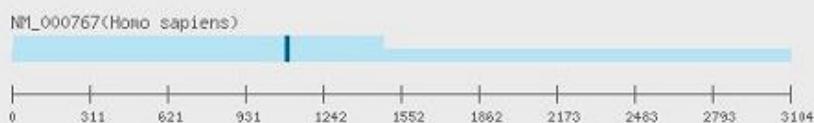

Reactivity: Human

Supplied Product: DEPC water

Target Refseq: NM_000767

Storage Instruction: Store at -20°C, do not exceed 4 - 5 freeze-thaw cycles to ensure product integrity.

Note: Position of the Chimera RNAi.

Applications

RNAi Knockdown

Gene Information

Entrez GeneID: 1555

Gene Name: CYP2B6

Gene Alias: CPB6,CYP2B,CYPIIB6,IIB1,P450

Gene cytochrome P450, family 2, subfamily B, polypeptide 6
Description:

Omim ID: [123930](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: This gene, CYP2B6, encodes a member of the cytochrome P450 superfamily of enzymes. The cytochrome P450 proteins are monooxygenases which catalyze many reactions involved in drug metabolism and synthesis of cholesterol, steroids and other lipids. This protein localizes to the endoplasmic reticulum and its expression is induced by phenobarbital. The enzyme is known to metabolize some xenobiotics, such as the anti-cancer drugs cyclophosphamide and ifosfamide. Transcript variants for this gene have been described; however, it has not been resolved whether these transcripts are in fact produced by this gene or by a closely related pseudogene, CYP2B7. Both the gene and the pseudogene are located in the middle of a CYP2A pseudogene found in a large cluster of cytochrome P450 genes from the CYP2A, CYP2B and CYP2F subfamilies on chromosome 19q. [provided by RefSeq]

Other Designations: cytochrome P450, subfamily IIB (phenobarbital-inducible), polypeptide 6
