ACE Pre-design Chimera RNAi

Catalog # : H00001636-R02

規格 : [10 nmol] [20 nmol]

List All

Specification

Product Description: Homo sapiens angiotensin I converting enzyme (peptidyl-dipeptidase A) 1 (ACE), transcript variant 2, mRNA.

Reactivity: Human

Supplied Product: DEPC water

Target Refseq: NM_152830

Target Region: Coding sequence

Storage Instruction: Store at -20°C, do not exceed 4 - 5 freeze-thaw cycles to ensure product integrity.

Note: Position of the Chimera RNAi.
The related RNAi products listed below were designed from different accession number but sharing the same RNAi sequence.

Application Image

RNAi Knockdown

Applications

RNAi Knockdown

Gene Information

Entrez GeneID: [1636](#)

Gene Name: ACE

Gene Alias: ACE1,CD143,DCP,DCP1,MGC26566

Gene Description: angiotensin I converting enzyme (peptidyl-dipeptidase A) 1

Omim ID: [104300](#), [106180](#), [267430](#), [603933](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: This gene encodes an enzyme involved in catalyzing the conversion of angiotensin I into a physiologically active peptide angiotensin II. Angiotensin II is a potent vasopressor and aldosterone-stimulating peptide that controls blood pressure and fluid-electrolyte balance. This enzyme plays a key role in the renin-angiotensin system. Many studies have associated the presence or absence of a 287 bp Alu repeat element in this gene with the levels of circulating enzyme or cardiovascular pathophysiologies. Two most abundant alternatively spliced variants of this gene encode two isozymes - the somatic form and the testicular form that are equally active. Multiple additional alternatively spliced variants have been identified but their full length nature has not been determined. [provided by RefSeq]

Other Designations: CD143 antigen,angiotensin I converting enzyme,angiotensin converting enzyme, somatic isoform,carboxycathepsin,dipeptidyl carboxypeptidase 1,kininase II,peptidase P,peptidyl-dipeptidase A,testicular ECA
