DCTN1 Pre-design Chimera RNAi

Catalog # : H00001639-R01

規格 : [10 nmol] [20 nmol]

List All

Specification

Product Description: Homo sapiens dynactin 1 (p150, glued homolog, Drosophila) (DCTN1), transcript variant 1, mRNA.

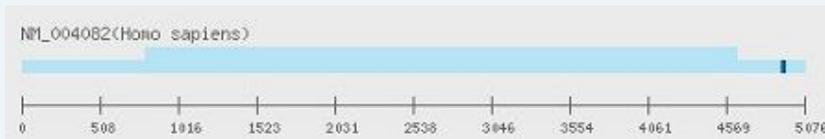

Reactivity: Human

Supplied Product: DEPC water

Target Refseq: NM_004082

Storage Instruction: Store at -20°C, do not exceed 4 - 5 freeze-thaw cycles to ensure product integrity.

Note: Position of the Chimera RNAi.

Application Image

RNAi Knockdown

Applications

RNAi Knockdown

Gene Information

Entrez GeneID: 1639

Gene Name: DCTN1

Gene Alias: DAP-150,DP-150,HMN7B,P135

Gene dynactin 1 (p150, glued homolog, Drosophila)

Description:

Omim ID: [105400](#), [601143](#), [607641](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: This gene encodes the largest subunit of dynactin, a macromolecular complex consisting of 10 subunits ranging in size from 22 to 150 kD. Dynactin binds to both microtubules and cytoplasmic dynein. Dynactin is involved in a diverse array of cellular functions, including ER-to-Golgi transport, the centripetal movement of lysosomes and endosomes, spindle formation, chromosome movement, nuclear positioning, and axonogenesis. This subunit interacts with dynein intermediate chain by its domains directly binding to dynein and binds to microtubules via a highly conserved glycine-rich cytoskeleton-associated protein (CAP-Gly) domain in its N-terminus. Alternative splicing of this gene results in multiple transcript variants encoding distinct isoforms. Mutations in this gene cause distal hereditary motor neuropathy type VIIIB (HMN7B) which is also known as distal spinal and bulbar muscular atrophy (dSBMA). [provided by RefSeq]

Other Designations: 150 kDa dynein-associated polypeptide, dynactin 1, p150, Glued homolog, p150-glued
