**Gene Name:** EIF4EBP2

**Gene Alias:** 4EBP2,PHASII

**Gene Description:** eukaryotic translation initiation factor 4E binding protein 2

**Omim ID:** [602224](#)

**Gene Ontology:** [Hyperlink](#)

**Gene Summary:** This gene encodes a member of the eukaryotic translation initiation factor 4E binding protein family. The gene products of this family bind eIF4E and inhibit translation initiation. However, insulin and other growth factors can release this inhibition via a phosphorylation-dependent disruption of their binding to eIF4E. Regulation of protein production through these gene products have been implicated in cell proliferation, cell differentiation and viral infection. [provided by RefSeq]

**Other Designations:** OTTHUMP00000019756,phosphorylated, heat and acid stable regulated by insulin protein II
