F10 Pre-design Chimera RNAi

Catalog # : H00002159-R01

規格 : [10 nmol] [20 nmol]

List All

Specification

Product Homo sapiens coagulation factor X (F10), mRNA.

Description:

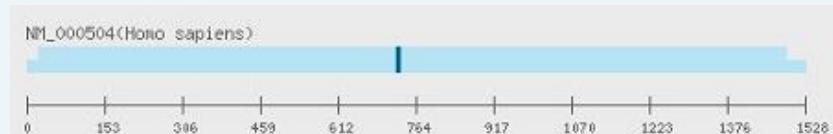

Reactivity: Human

Supplied Product: DEPC water

Target Refseq: NM_000504

Storage Instruction: Store at -20°C, do not exceed 4 - 5 freeze-thaw cycles to ensure product integrity.

Note: Position of the Chimera RNAi.

Applications

RNAi Knockdown

Gene Information

Entrez GeneID: 2159

Gene Name: F10

Gene Alias: FX, FXA

Application Image

RNAi Knockdown

Gene coagulation factor X

Description:

Omim ID: [227600](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: This gene encodes the vitamin K-dependent coagulation factor X of the blood coagulation cascade. This factor undergoes multiple processing steps before its preproprotein is converted to a mature two-chain form by the excision of the tripeptide RKR. Two chains of the factor are held together by 1 or more disulfide bonds; the light chain contains 2 EGF-like domains, while the heavy chain contains the catalytic domain which is structurally homologous to those of the other hemostatic serine proteases. The mature factor is activated by the cleavage of the activation peptide by factor IXa (in the intrinsic pathway), or by factor VIIa (in the extrinsic pathway). The activated factor then converts prothrombin to thrombin in the presence of factor Va, Ca²⁺, and phospholipid during blood clotting. Mutations of this gene result in factor X deficiency, a hemorrhagic condition of variable severity. [provided by RefSeq]

Other Designations: OTTHUMP0000018735, Stuart-Prower factor, factor Xa, prothrombinase
