Gene Name: FABP5

Gene Alias: E-FABP,EFABP,PA-FABP,PAFABP

Gene Description: fatty acid binding protein 5 (psoriasis-associated)

Description:

Omim ID: [605168](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: This gene encodes the fatty acid binding protein found in epidermal cells, and was first identified as being upregulated in psoriasis tissue. Fatty acid binding proteins are a family of small, highly conserved, cytoplasmic proteins that bind long-chain fatty acids and other hydrophobic ligands. It is thought that FABPs roles include fatty acid uptake, transport, and metabolism. The human genome contains many pseudogenes similar to this locus. [provided by RefSeq]
