## Datasheet

### FDPS (Human) Recombinant Protein (Q01)

**Catalog Number:** H00002224-Q01

**Regulation Status:** For research use only (RUO)

**Product Description:** Human FDPS partial ORF ( NP\_001995.1, 320 a.a. - 419 a.a.) recombinant protein with GST-tag at N-terminal.

**Sequence:**

VTGKIGTDIQDNKCSWLVVQCLQRATPEQYQILKENY  
GQKEAEKVARVKALYEELDLPVFLQYEEDSYSHIMAL  
IEQYAAPLPPAVFLGLARKIYKRRK

**Host:** Wheat Germ (in vitro)

**Theoretical MW (kDa):** 36.74

**Applications:** AP, Array, ELISA, WB-Re  
(See our web site product page for detailed applications information)

**Protocols:** See our web site at  
<http://www.abnova.com/support/protocols.asp> or product page for detailed protocols

**Preparation Method:** [in vitro wheat germ expression system](#)

**Purification:** Glutathione Sepharose 4 Fast Flow

**Storage Buffer:** 50 mM Tris-HCl, 10 mM reduced Glutathione, pH=8.0 in the elution buffer.

**Storage Instruction:** Store at -80°C. Aliquot to avoid repeated freezing and thawing.

**Entrez GeneID:** 2224

**Gene Symbol:** FDPS

**Gene Alias:** FPPS, FPS

**Gene Summary:** This gene encodes an enzyme that catalyzes the production of geranyl pyrophosphate and farnesyl pyrophosphate from isopentenyl pyrophosphate and dimethylallyl pyrophosphate. The resulting product, farnesyl pyrophosphate, is a key intermediate in

cholesterol and sterol biosynthesis, a substrate for protein farnesylation and geranylgeranylation, and a ligand or agonist for certain hormone receptors and growth receptors. Drugs that inhibit this enzyme prevent the post-translational modifications of small GTPases and have been used to treat diseases related to bone resorption. Multiple pseudogenes have been found on chromosomes 1, 7, 14, 15, 21 and X. Multiple transcript variants encoding different isoforms have been found for this gene]
