Gene glutathione synthetase

Description:

Omim ID: [231900](#), [266130](#), [601002](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: Glutathione is important for a variety of biological functions, including protection of cells from oxidative damage by free radicals, detoxification of xenobiotics, and membrane transport. The protein encoded by this gene functions as a homodimer to catalyze the second step of glutathione biosynthesis, which is the ATP-dependent conversion of gamma-L-glutamyl-L-cysteine to glutathione. Defects in this gene are a cause of glutathione synthetase deficiency. [provided by RefSeq]

Other Designations: GSH synthetase, OTTHUMP00000030711, glutathione synthase
