Gene Name: GYPC

Gene Alias: CD236,CD236R,GE,GPC,GYPD,MGC117309,MGC126191,MGC126192

Gene Description: glycophorin C (Gerbich blood group)

Omim ID: [110750, 611162](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: Glycophorin C (GYPC) is an integral membrane glycoprotein. It is a minor species carried by human erythrocytes, but plays an important role in regulating the mechanical stability of red cells. A number of glycophorin C mutations have been described. The Gerbich and Yus phenotypes are due to deletion of exon 3 and 2, respectively. The Webb and Duch antigens, also known as glycophorin D, result from single point mutations of the glycophorin C gene. The glycophorin C protein has very little homology with glycophorins A and B. Other Designations: glycophorin C
