HIST1H1T Pre-design Chimera RNAi

Catalog # : H00003010-R01

規格 : [10 nmol] [20 nmol]

List All

Specification

Product Description: Homo sapiens histone 1, H1t (HIST1H1T), mRNA.

Reactivity: Human

Supplied Product: DEPC water

Target Refseq: NM_005323

Storage Instruction: Store at -20°C, do not exceed 4 - 5 freeze-thaw cycles to ensure product integrity.

Note: Position of the Chimera RNAi.

Application Image

RNAi Knockdown

Applications

RNAi Knockdown

Gene Information

Entrez GeneID: [3010](#)

Gene Name: HIST1H1T

Gene Alias: H1FT,H1t,MGC163222,dJ221C16.2

Gene histone cluster 1, H1t

Description:

Omim ID: [142712](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: Histones are basic nuclear proteins responsible for nucleosome structure of the chromosomal fiber in eukaryotes. Two molecules of each of the four core histones (H2A, H2B, H3, and H4) form an octamer, around which approximately 146 bp of DNA is wrapped in repeating units, called nucleosomes. The linker histone, H1, interacts with linker DNA between nucleosomes and functions in the compaction of chromatin into higher order structures. This gene is intronless and encodes a member of the histone H1 family. Transcripts from this gene lack polyA tails but instead contain a palindromic termination element. This gene is found in the large histone gene cluster on chromosome 6. [provided by RefSeq]

Other Designations: H1 histone family, member T (testis-specific), OTTHUMP00000016147, histone 1, H1t
