In situ Proximity Ligation Assay (Cell)

Proximity Ligation Analysis of protein-protein interactions between HCK and PIK3CB. HeLa cells were stained with anti-HCK rabbit purified polyclonal 1:1200 and anti-PIK3CB mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex, and nuclei were counterstained with DAPI (blue).

In situ Proximity Ligation Assay (Cell)

Proximity Ligation Analysis of protein-protein interactions between HCK and SOS1. Huh7 cells were stained with anti-HCK rabbit purified polyclonal 1:1200 and anti-SOS1 mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex, and nuclei were counterstained with DAPI (blue).

In situ Proximity Ligation Assay (Cell)

Proximity Ligation Analysis of protein-protein interactions between HCK and CRKL. Mahlavi cells were stained with anti-HCK rabbit purified polyclonal 1:1200 and anti-CRKL mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex, and nuclei were counterstained with DAPI (blue).

Gene Name: HCK

Gene Alias: JTK9

Gene hemopoietic cell kinase

Description:

Omim ID: [142370](#)

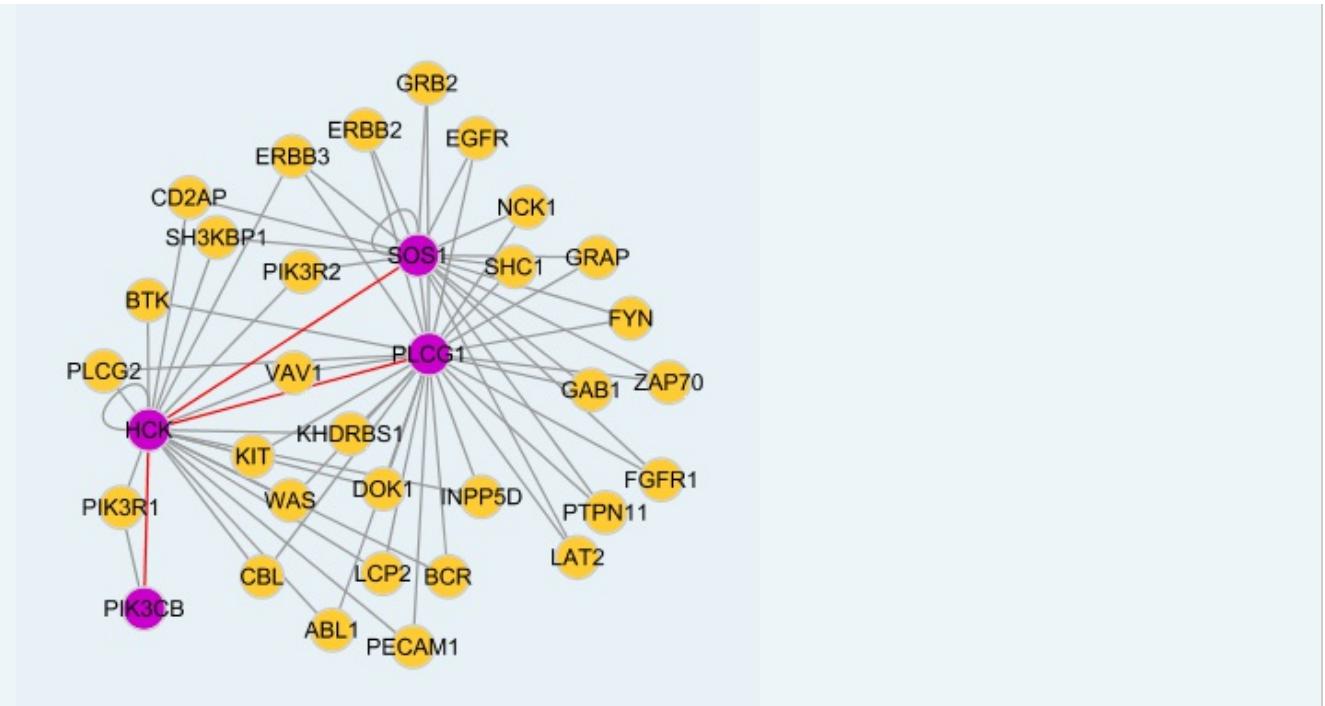

Gene Ontology: [Hyperlink](#)

Gene Summary: The protein encoded by this gene is a protein-tyrosine kinase that is predominantly expressed in hemopoietic cell types. The encoded protein may help couple the Fc receptor to the activation of the respiratory burst. In addition, it may play a role in neutrophil migration and in the degranulation of neutrophils. Alternate translation initiation site usage, including a non-AUG (CUG) codon, results in the production of two different isoforms, that have different subcellular localization.
