HLA-DRB3 Pre-design Chimera RNAi

Catalog # : H00003125-R02

規格 : [10 nmol] [20 nmol]

List All

Specification

Product Description: Homo sapiens major histocompatibility complex, class II, DR beta 3 (HLA-DRB3), mRNA.

Reactivity: Human

Supplied Product: DEPC water

Target Refseq: NM_022555

Storage Instruction: Store at -20°C, do not exceed 4 - 5 freeze-thaw cycles to ensure product integrity.

Note: Position of the Chimera RNAi.

Application Image

RNAi Knockdown

Applications

RNAi Knockdown

Gene Information

Entrez GeneID: 3125

Gene Name: HLA-DRB3

Gene Alias: HLA-DR3B,MGC117330

Gene major histocompatibility complex, class II, DR beta 3

Description:

Gene Ontology: [Hyperlink](#)

Gene Summary: HLA-DRB3 belongs to the HLA class II beta chain paralogues. This class II molecule is a heterodimer consisting of an alpha (DRA) and a beta (DRB) chain, both anchored in the membrane. It plays a central role in the immune system by presenting peptides derived from extracellular proteins. Class II molecules are expressed in antigen presenting cells (APC: B lymphocytes, dendritic cells, macrophages). The beta chain is approximately 26-28 kDa and its gene contains 6 exons. Exon one encodes the leader peptide, exons 2 and 3 encode the two extracellular domains, exon 4 encodes the transmembrane domain and exon 5 encodes the cytoplasmic tail. Within the DR molecule the beta chain contains all the polymorphisms specifying the peptide binding specificities. Typing for these polymorphisms is routinely done for bone marrow and kidney transplantation. DRB1 is expressed at a level five times higher than its paralogues DRB3, DRB4 and DRB5. The presence of DRB3 is linked with allelic variants of DRB1, otherwise it is omitted. There are 4 related pseudogenes: DRB2, DRB6, DRB7, DRB8 and DRB9. [provided by RefSeq]

Other Designations: MHC class II HLA-DR beta 3 chain, MHC class II antigen DR beta 3 chain, human leucocyte antigen DRB3
