Gene Name: LLGL2

Gene Alias: HGL,LGL2

Gene Description: lethal giant larvae homolog 2 (Drosophila)

Gene Ontology: [Hyperlink](#)

Gene Summary: The lethal (2) giant larvae protein of Drosophila plays a role in asymmetric cell division, epithelial cell polarity, and cell migration. This human gene encodes a protein similar to lethal (2) giant larvae of Drosophila. In fly, the protein's ability to localize cell fate determinants is regulated by the atypical protein kinase C (aPKC). In human, this protein interacts with aPKC-containing complexes and is cortically localized in mitotic cells. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq]

Other Designations: human giant larvae homolog,lethal giant larvae homolog 2
