Datasheet

MEF2A (Human) Recombinant Protein (Q01)

Catalog Number: H00004205-Q01

Regulation Status: For research use only (RUO)

Product Description: Human MEF2A partial ORF (AAH13437.1, 71 a.a. - 170 a.a.) recombinant protein with GST tag at N-terminal.

Sequence:

EYNEPHESRTNSDIVEALNKKEHRGCDSPDPDTSYVL
TPHTEEKYKKINEEFDNMMRNHAKIAPGLPPQNFMSV
TVPVTSPNALSYTNP GSSSLVSPSLAA

Host: Wheat Germ (in vitro)

Theoretical MW (kDa): 36.63

Applications: AP, Array, ELISA, WB-Re
(See our web site product page for detailed applications information)

Protocols: See our web site at
<http://www.abnova.com/support/protocols.asp> or product page for detailed protocols

Preparation Method: [in vitro wheat germ expression system](#)

Purification: Glutathione Sepharose 4 Fast Flow

Storage Buffer: 50 mM Tris-HCl, 10 mM reduced Glutathione, pH=8.0 in the elution buffer.

Storage Instruction: Store at -80°C. Aliquot to avoid repeated freezing and thawing.

Entrez GeneID: 4205

Gene Symbol: MEF2A

Gene Alias: ADCAD1, RSRFC4, RSRFC9

Gene Summary: The process of differentiation from mesodermal precursor cells to myoblasts has led to the discovery of a variety of tissue-specific factors that regulate muscle gene expression. The myogenic basic helix-loop-helix proteins, including myoD (MIM 159970),

myogenin (MIM 159980), MYF5 (MIM 159990), and MRF4 (MIM 159991) are one class of identified factors. A second family of DNA binding regulatory proteins is the myocyte-specific enhancer factor-2 (MEF2) family. Each of these proteins binds to the MEF2 target DNA sequence present in the regulatory regions of many, if not all, muscle-specific genes. The MEF2 genes are members of the MADS gene family (named for the yeast mating type-specific transcription factor MCM1, the plant homeotic genes 'agamous' and 'deficiens' and the human serum response factor SRF (MIM 600589)), a family that also includes several homeotic genes and other transcription factors, all of which share a conserved DNA-binding domain.[supplied by OMIM]
