Gene Name: MEN1

Gene Alias: MEA1, SCG2

Gene Description: multiple endocrine neoplasia I

Omim ID: [131100](#), [145000](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: This gene encodes menin, a putative tumor suppressor associated with a syndrome known as multiple endocrine neoplasia type 1. In vitro studies have shown menin is localized to the nucleus, possesses two functional nuclear localization signals, and inhibits transcriptional activation by JunD, however, the function of this protein is not known. Two messages have been detected on northern blots but the larger message has not been characterized. Alternative splicing results in

multiple transcript variants. [provided by RefSeq]
