Immunoprecipitation-Western Blot

Gene Summary: This gene encodes a member of the NeuroD family of basic helix-loop-helix (bHLH) transcription factors. The protein forms heterodimers with other bHLH proteins and activates transcription of genes that contain a specific DNA sequence known as the E-box. It regulates expression of the insulin gene, and mutations in this gene result in type II diabetes mellitus. [provided by RefSeq]

Other Designations: basic helix-loop-helix transcription factor, beta-cell E-box transactivator 2, neurogenic differentiation factor 1, neurogenic helix-loop-helix protein NEUROD
