Datasheet

PRKCH (Human) Recombinant Protein (P01)

Catalog Number: H00005583-P01

Regulation Status: For research use only (RUO)

Product Description: Human PRKCH full-length ORF (AAH01000, 1 a.a. - 41 a.a.) recombinant protein with GST-tag at N-terminal.

Sequence:

MALEIVDNEMRFYEVYRSTYERLSLWAWDVNRSQKE
GKCEE

Host: Wheat Germ (in vitro)

Theoretical MW (kDa): 30.25

Applications: AP, Array, ELISA, WB-Re

(See our web site product page for detailed applications information)

Protocols: See our web site at

<http://www.abnova.com/support/protocols.asp> or product page for detailed protocols

Preparation Method: [in vitro wheat germ expression system](#)

Purification: Glutathione Sepharose 4 Fast Flow

Storage Buffer: 50 mM Tris-HCl, 10 mM reduced Glutathione, pH=8.0 in the elution buffer.

Storage Instruction: Store at -80°C. Aliquot to avoid repeated freezing and thawing.

Entrez GeneID: 5583

Gene Symbol: PRKCH

Gene Alias: MGC26269, MGC5363, PKC-L, PKCL, PRKCL, nPKC-eta

Gene Summary: Protein kinase C (PKC) is a family of serine- and threonine-specific protein kinases that can be activated by calcium and the second messenger diacylglycerol. PKC family members phosphorylate a wide variety of protein targets and are known to be

involved in diverse cellular signaling pathways. PKC family members also serve as major receptors for phorbol esters, a class of tumor promoters. Each member of the PKC family has a specific expression profile and is believed to play a distinct role in cells. The protein encoded by this gene is one of the PKC family members. It is a calcium-independent and phospholipids-dependent protein kinase. It is predominantly expressed in epithelial tissues and has been shown to reside specifically in the cell nucleus. This protein kinase can regulate keratinocyte differentiation by activating the MAP kinase MAPK13 (p38delta)-activated protein kinase cascade that targets CCAAT/enhancer-binding protein alpha (CEBPA). It is also found to mediate the transcription activation of the transglutaminase 1 (TGM1) gene. [provided by RefSeq]
