Gene Name: KLK10

Gene Alias: NES1,PRSSL1

Gene Description: kallikrein-related peptidase 10

Omim ID: [602673](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: Kallikreins are a subgroup of serine proteases having diverse physiological functions. Growing evidence suggests that many kallikreins are implicated in carcinogenesis and some have potential as novel cancer and other disease biomarkers. This gene is one of the fifteen kallikrein subfamily members located in a cluster on chromosome 19. Its encoded protein is secreted and may play a role in suppression of tumorigenesis in breast and prostate cancers. Alternate splicing of this gene results in multiple transcript variants encoding the same protein. [provided by RefSeq]

Other Designations: breast normal epithelial cell associated serine protease,kallikrein 10,normal epithelial cell-specific 1,protease, serine-like, 1
