Applications

Western Blot (Transfected lysate)

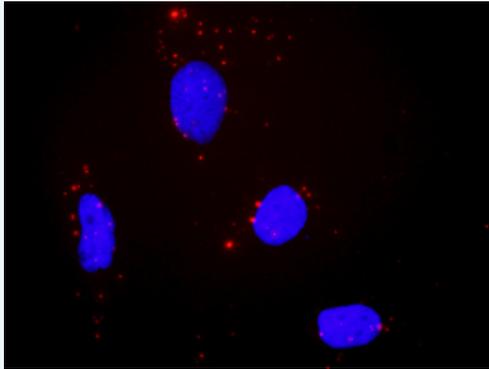

Western Blot analysis of PTPRR expression in transfected 293T cell line ([H00005801-T02](#)) by PTPRR MaxPab polyclonal antibody.

Lane 1: PTPRR transfected lysate(73.90 KDa).
Lane 2: Non-transfected lysate.

***In situ* Proximity Ligation Assay (Cell)**

Proximity Ligation Analysis of protein-protein interactions between PTPRR and MAPK1. HeLa cells were stained with anti-PTPRR rabbit purified polyclonal 1:1200 and anti-MAPK1 mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex, and nuclei were counterstained with DAPI (blue).

Gene Ontology: [Hyperlink](#)

Gene Summary: The protein encoded by this gene is a member of the protein tyrosine phosphatase (PTP) family. PTPs are known to be signaling molecules that regulate a variety of cellular processes including cell growth, differentiation, mitotic cycle, and oncogenic transformation. This PTP possesses an extracellular region, a single transmembrane region, and a single intracellular catalytic domains, and thus represents a receptor-type PTP. The similar gene predominately expressed in mouse brain was found to associate with, and thus regulate the activity and cellular localization of MAP kinases. The rat counterpart of this gene was reported to be regulated by the nerve growth factor, which suggested the function of this gene in neuronal growth and differentiation. [provided by RefSeq]

**Other
Designations:** Ch-1 PTPase,protein tyrosine phosphatase Cr1PTPase,protein-tyrosine phosphatase NC-PTPCOM1
