Datasheet

RFX5 (Human) Recombinant Protein (Q01)

Catalog Number: H00005993-Q01

Regulation Status: For research use only (RUO)

Product Description: Human RFX5 partial ORF (NP_000440, 516 a.a. - 616 a.a.) recombinant protein with GST-tag at N-terminal.

Sequence:
ERPGPMGEAEKGAVLAQGQGDGTVSKGGRGPGSQH TKEAEDKIPLVPSKVSVIKGSRSQKEAFPLAKGEVDTA PQGNKDLKEHVLQSSLSQEHKDPKATPP

Host: Wheat Germ (in vitro)

Theoretical MW (kDa): 36.85

Applications: AP, Array, ELISA, WB-Re
(See our web site product page for detailed applications information)

Protocols: See our web site at http://www.abnova.com/support/protocols.asp or product page for detailed protocols

Preparation Method: *in vitro* wheat germ expression system

Purification: Glutathione Sepharose 4 Fast Flow

Storage Buffer: 50 mM Tris-HCl, 10 mM reduced Glutathione, pH=8.0 in the elution buffer.

Storage Instruction: Store at -80°C. Aliquot to avoid repeated freezing and thawing.

Entrez GeneID: 5993

Gene Symbol: RFX5

Gene Alias: -

Gene Summary: A lack of MHC-II expression results in a severe immunodeficiency syndrome called MHC-II deficiency, or the bare lymphocyte syndrome (BLS; MIM 209920). At least 4 complementation groups have been identified in B-cell lines established from patients with BLS. The molecular defects in complementation groups B, C, and D all lead to a deficiency in RFX, a nuclear protein complex that binds to the X box of MHC-II promoters. The lack of RFX binding activity in complementation group C results from mutations in the RFX5 gene encoding the 75-kD subunit of RFX (Steimle et al., 1995). RFX5 is the fifth member of the growing family of DNA-binding proteins sharing a novel and highly characteristic DNA-binding domain called the RFX motif. Multiple alternatively spliced transcript variants have been found but the full-length natures of only two have been determined. [provided by RefSeq]
