**Entrez GeneID:** 6047

**Gene Symbol:** RNF4

**Gene Alias:** RES4-26, SNURF

**Gene Summary:** The protein encoded by this gene contains a RING finger motif and acts as a transcription

regulator. This protein has been shown to interact with, and inhibit the activity of, TRPS1, a transcription suppressor of GATA-mediated transcription. Transcription repressor ZNF278/PATZ is found to interact with this protein, and thus reduce the enhancement of androgen receptor-dependent transcription mediated by this protein. Studies of the mouse and rat counterparts suggested a role of this protein in spermatogenesis. [provided by RefSeq]
