Gene Name: RNF6

Gene Alias: DKFZp686P0776

Gene Description: ring finger protein (C3H2C3 type) 6

Omim ID: [133239](#), [604242](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: The protein encoded by this gene contains a RING-H2 finger motif. Deletions and mutations in this gene were detected in esophageal squamous cell carcinoma (ESCC), suggesting that this protein may be a potential tumor suppressor. Studies of the mouse counterpart suggested a role of this protein in the transcription regulation that controls germinal differentiation. Multiple alternatively spliced transcript variants encoding the same protein are observed. [provided by RefSeq]
