Datasheet

RORB (Human) Recombinant Protein (Q01)

Catalog Number: H00006096-Q01

Regulation Status: For research use only (RUO)

Product Description: Human RORB partial ORF (NP_008845, 136 a.a. - 224 a.a.) recombinant protein with GST-tag at N-terminal.

Sequence:

ETSGTYANGHVIDLPKSEGYYNVDSGQPSPDQSGLD
MTGIKQIKQEPIYDLTSVPNLFTYSSFNNGQLAPGITMT
EIDRIAQNIKSHL

Host: Wheat Germ (in vitro)

Theoretical MW (kDa): 35.53

Applications: AP, Array, ELISA, WB-Re
(See our web site product page for detailed applications information)

Protocols: See our web site at
<http://www.abnova.com/support/protocols.asp> or product page for detailed protocols

Preparation Method: [in vitro wheat germ expression system](#)

Purification: Glutathione Sepharose 4 Fast Flow

Storage Buffer: 50 mM Tris-HCl, 10 mM reduced Glutathione, pH=8.0 in the elution buffer.

Storage Instruction: Store at -80°C. Aliquot to avoid repeated freezing and thawing.

Entrez GeneID: 6096

Gene Symbol: RORB

Gene Alias: NR1F2, ROR-BETA, RZR-BETA, RZRB, bA133M9.1

Gene Summary: The protein encoded by this gene is a member of the NR1 subfamily of nuclear hormone receptors. It is a DNA-binding protein that can bind as a monomer or as a homodimer to hormone response

elements upstream of several genes to enhance the expression of those genes. The specific functions of this protein are not known, but it has been shown to interact with NM23-2, a nucleoside diphosphate kinase involved in organogenesis and differentiation. [provided by RefSeq]
