Datasheet

RPS21 (Human) Recombinant Protein (Q01)

Catalog Number: H00006227-Q01

Regulation Status: For research use only (RUO)

Product Description: Human RPS21 partial ORF (NP_001015, 1 a.a. - 81 a.a.) recombinant protein with GST-tag at N-terminal.

Sequence:

MQNDAGEFVDLYVPRKCSASNRIIGAKDHASIQMNVA
EVDKVTGRFNGQFKTYAICGAIRRMGESDDSLRLAKA
DGIVSK

Host: Wheat Germ (in vitro)

Theoretical MW (kDa): 34.65

Applications: AP, Array, ELISA, WB-Re
(See our web site product page for detailed applications information)

Protocols: See our web site at
<http://www.abnova.com/support/protocols.asp> or product page for detailed protocols

Preparation Method: [in vitro wheat germ expression system](#)

Purification: Glutathione Sepharose 4 Fast Flow

Storage Buffer: 50 mM Tris-HCl, 10 mM reduced Glutathione, pH=8.0 in the elution buffer.

Storage Instruction: Store at -80°C. Aliquot to avoid repeated freezing and thawing.

Entrez GeneID: 6227

Gene Symbol: RPS21

Gene Alias: -

Gene Summary: Ribosomes, the organelles that catalyze protein synthesis, consist of a small 40S subunit and a large 60S subunit. Together these subunits are composed of 4 RNA species and approximately 80 structurally distinct proteins. This gene

encodes a ribosomal protein that is a component of the 40S subunit. The protein belongs to the S21E family of ribosomal proteins. It is located in the cytoplasm. Alternative splice variants that encode different protein isoforms have been described, but their existence has not been verified. As is typical for genes encoding ribosomal proteins, there are multiple processed pseudogenes of this gene dispersed through the genome. [provided by RefSeq]
