Gene Name: SMARCE1

Gene Alias: BAF57

Gene Description: SWI/SNF related, matrix associated, actin dependent regulator of chromatin, subfamily e, member 1

Omim ID: [603111](#)

Gene Ontology: [Hyperlink](#)

Gene Summary: The protein encoded by this gene is part of the large ATP-dependent chromatin remodeling complex SWI/SNF, which is required for transcriptional activation of genes normally repressed by chromatin. The encoded protein, either alone or when in the SWI/SNF complex, can bind to 4-way junction DNA, which is thought to mimic the topology of DNA as it enters or exits the nucleosome. The protein contains a DNA-binding HMG domain, but disruption of this domain does not abolish the DNA-binding or nucleosome-displacement activities of the SWI/SNF complex. Unlike most of the SWI/SNF complex proteins, this protein has no yeast counterpart. [provided by RefSeq]

Other Designations: SWI/SNF-related matrix-associated actin-dependent regulator of chromatin e1,mammalian chromatin remodeling complex BRG1-associated factor 57
