## EVA1 293T Cell Transient Overexpression Lysate(Denatured)

Catalog # : H00010205-T01

規格 : [ 100 uL ]

[List All](#)

### Specification

Transfected 293T

Cell Line:

Plasmid: pCMV-EVA1 full-length

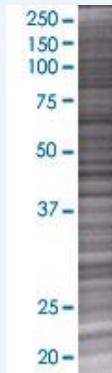

Host: Human

Theoretical MW 23.76

(kDa):

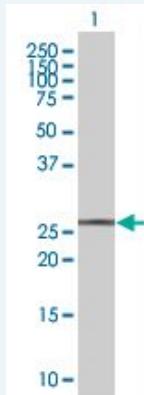

**Quality Control Testing:** Transient overexpression cell lysate was tested with Anti-EVA1 antibody (H00010205-B01) by Western Blots.

#### SDS-PAGE Gel

MPZL2 transfected lysate.

#### Western Blot

Lane 1: MPZL2 transfected lysate ( 23.76 KDa)

Lane 2: Non-transfected lysate.

**Storage Buffer:** 1X Sample Buffer (50 mM Tris-HCl, 2% SDS, 10% glycerol, 300 mM 2-mercaptoethanol, 0.01% Bromophenol blue)

**Storage Instruction:** Store at -80°C. Aliquot to avoid repeated freezing and thawing.

**MSDS:**

Protein [NP\\_005788.1](#)

Accession#:

Gene Name: MPZL2

Gene Alias: EVA,EVA1

Gene myelin protein zero-like 2

Description:

Omim ID: [604873](#)

### Gene Ontology: [Hyperlink](#)

**Gene Summary:** Thymus development depends on a complex series of interactions between thymocytes and the stromal component of the organ. Epithelial V-like antigen (EVA) is expressed in thymus epithelium and strongly downregulated by thymocyte developmental progression. This gene is expressed in the thymus and in several epithelial structures early in embryogenesis. It is highly homologous to the myelin protein zero and, in thymus-derived epithelial cell lines, is poorly soluble in nonionic detergents, strongly suggesting an association to the cytoskeleton. Its capacity to mediate cell adhesion through a homophilic interaction and its selective regulation by T cell maturation might imply the participation of EVA in the earliest phases of thymus organogenesis. The protein bears a characteristic V-type domain and two potential N-glycosylation sites in the extracellular domain; a putative serine phosphorylation site for casein kinase 2 is also present in the cytoplasmic tail. Two transcript variants encoding the same protein have been found for this gene.
