Gene Symbol: INADL

Gene Alias: Cipp, FLJ26982, InaD-like, PATJ

Gene Summary: This gene encodes a protein with multiple PDZ domains. PDZ domains mediate protein-protein interactions, and proteins with multiple PDZ domains often organize multimeric complexes at the plasma membrane. This protein localizes to tight

junctions and to the apical membrane of epithelial cells. A similar protein in *Drosophila* is a scaffolding protein which tethers several members of a multimeric signaling complex in photoreceptors. [provided by RefSeq]
